

CERTIFIED REMANUFACTURED CRUSHERS

Telsmith certified remanufactured crushers are used crushers that have been thoroughly refurbished by experts at the Telsmith Factory. These machines offer quality you can trust from a company that stands behind their products. Simply put, the Certified Remanufacturing Program offers outstanding value and confidence.

LIKE NEW CONDITION:

Certified remanufactured means every part has been removed from the machine and thoroughly inspected. The main frame is sand blasted and inspected for wear or damage and shafting is inspected for wear or cracking. Any component reused in the machine has passed inspection and met new part tolerances or it is replaced.

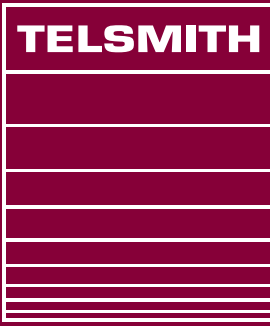

Key internal parts, including; all roller bearings, bronze bushings, seals and wear liners are automatically replaced with new parts.

New paint is applied and final quality assurance testing is performed, just as it is with new equipment. The only way to get closer to new, is to pay for new.

CERTIFIED AND GUARANTEED:

Once the machine has gone through the certification process, you can have complete confidence in its ability to stand up to the rigors of crushing – Telsmith certainly does. We back it with our new machine warranty and the best service in the industry.

As with a new machine, Telsmith experts will work with you to be sure you have the correct machine for the job and that crushing liners are appropriate for the intended use. Additional installation assistance is available in a variety of levels including engineering and regional factory service technicians. Once in production, you'll get the performance we promised - guaranteed.

BEFORE AND AFTER

WHERE DOES THE CERTIFIED REMANUFACTURED EQUIPMENT ORIGINATE FROM?

Most equipment entering the program, came in as a trade-in against new equipment. Occasionally, used equipment is purchased independently, following inspection, specifically to go into the certified remanufacturing program.

Perhaps the most successful use of the program has come from companies swapping out their old equipment for certified remanufactured equipment that can drop in place, eliminating the downtime of a typical rebuild.

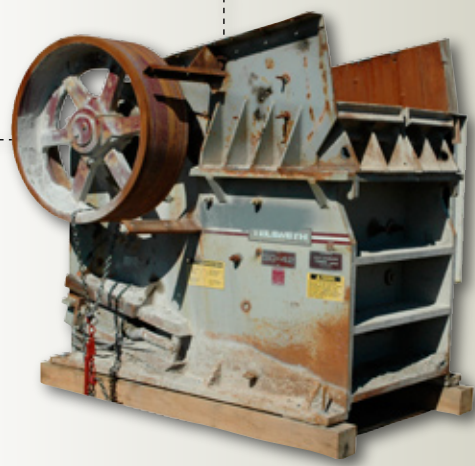

WHAT TELSMTIH EQUIPMENT CAN BE FOUND IN THE CERTIFIED REMANUFACTURING PROGRAM?

- H-series Gyrasphere® crushers
- SBS cone crushers
- Certain model jaw crushers (consult factory)
- Hydraulic and Lube System units for the above crushers

WHY SHOULD YOU CONSIDER CERTIFIED REMANUFACTURED EQUIPMENT?

Certified remanufactured equipment offers the performance, dependability, support and warranty that comes with new equipment, only at a fraction of the cost. Assurance that internal defects have been repaired eliminates the risk of buying used equipment. Simply put, the program offers terrific value and confidence.

- Notes:
- Certified remanufactured equipment may not be available at all times. Contact Telsmith, Inc. for current availability.
 - Re-used structural components are subject to normal fatigue and wear from previous use. Some signs of previous use will be evident in areas that do not have machined tolerance specifications. None of which will affect performance or dependability of the equipment.

WITH A TELSMTIH "CERTIFIED REMANUFACTURE"
YOU KNOW WHAT YOU ARE GETTING AND
TELSMTIH STANDS BEHIND IT.
